

Group Leader Positions

The Centre d'Immunologie at Marseille-Luminy (CIML) is inviting applications for group leader positions

The CIML is located on a pluridisciplinary campus and is affiliated with Aix Marseille University, INSERM, CNRS and Marseille Hospitals. While particular attention will be given to projects addressing adaptive immunity, epigenetics and systems biology, the CIML welcomes applications from outstanding candidates interested in any aspect of human and model organism immunology including pathology, genetics, cell biology, evolution and development. The CIML actively promotes equal opportunities; applications from female scientists are especially welcome.

The CIML has a tradition of high quality research and provides an outstanding international research environment, with a renowned graduate program. The institute is currently composed of 230 members in 16 laboratories and 8 scientific core facilities (<http://www.ciml.univ-mrs.fr/>).

Candidates are asked to provide:

- A curriculum vitae (max. 3 pages)
- A concise presentation of future research plans, with particular attention to their ground-breaking nature (max. 5 pages)
- The names of three referees.

Applications should be sent by June 15th, 2014, to vivier@ciml.univ-mrs.fr

CIML Groups

Lena Alexopoulou

Toll-like receptors in immunity

Marc Bajenoff

Stromal cell immunobiology

Marc Dalod

Dendritic cells and antiviral defense

Jonathan Ewbank

Innate immunity in *C. elegans*

Pierre Ferrier

Control of gene expression and recombination during lymphocyte differentiation

Pierre Golstein

Molecular bases of programmed cell death

Jean-Pierre Gorvel

Immunology and cell biology of pathogen/host cell interactions

Hai Tao He & Didier Marguet

Membrane dynamics and T lymphocyte signaling

Toby Lawrence

Inflammation biology group

Bernard & Marie Malissen

Genetic dissection of the function of T cells and dendritic cells

Bertrand Nadel

Genomic instability and human hemopathies

Philippe Naquet

Tissue inflammation and immunity

Philippe Pierre

Dendritic cell biology

Claudine Schiff

Physiological and pathological aspects of B cell differentiation

Michael Sieweke

Stem cell and macrophage biology

Eric Vivier, Director of the CIML

Natural killer cells and innate immunity
